

Setting Up Your Router

- 1 Plug in the devices as shown above, making sure the ethernet cable from the Power over Ethernet Injector LAN port is plugged into the WAN [Blue] port of the Wireless Router.
- 2 If this computer does not connect wirelessly, plug it into one of the LAN [Yellow] ports on your router (a yellow ethernet cable is supplied).
- 3 Make sure the power is plugged into the router and all other devices are powered on.
- 4 After about 3 minutes your router should be connected to the internet.
- 5 The Power, Internet, Wireless and any other corresponding Ethernet lights on the router should all come on.

Did you know this device supports a home phone or fax machine over Lightwire Landline?
